Each of us is a channel and source for the life force which nature sings to. We are emitters of energy on many levels and bandwidths. We are each producing a song deep inside which, when unfettered, can join with others in a choir of harmonious sound. We have the ability to control our technology by learning of our life source, our energy song. The ego in us wants to force the gross parts of our songs down other people's throats. But harmony and beauty swell not from homogeneity but from diversity and love.

The technology is teaching us that our environment is much more complex than the perceived reality would have us believe. We can tune into an infinite number of energy bandwidths flowing through our planet, our bodies, and decipher different patterns and amplitudes at each level or bandwidth of energy. We are also transmitting/generating an incredible amount of energy at different bandwidths causing a pollution of monotonous information that inundates all our being. Urban environments with their high density of people and technology are clogged with man made energy cycles. Our electrical wires are surrounded by a constantly fluctuating field of magnetic force. Our radio transmissions, our jack hammers, our motors, our televisions (each emitting a 15,000 cycle sound) all are intensifying man's subserviance to technology. Technology which stemmed from his attempts to obliterate nature and make life "easier" has created an environment which for the most part is irritating and unhealthy for sustaining life.

The monotone rhythms of progress won't be the sounds that save us from an engulfment by their refuse. We can't clean up the environment with more machines because they too have wastes. It seems the least pollution occurs when technology is used for information flow, unaltered by merchandizing and money lending. The choice is ours to continue our planet or abandon it to the rushes of stagnation. We can't expect to do it through dogma or rhetoric (religious, political, or otherwise) both of which are shields for shutting down the communication process right in our own brains. We have to do it ourselves on personal levels with our own energy and sharing the things we learn with others.
